

JAMES OLIVER CURWOOD

CHAPTER XVII.—Continued.

That night she slept again where Kazan had lain, and three times she called for him without answer.

And then, one night, the call came to her. It set her quivering with a strange new excitement—something that may have been a new hope, and in the moonlight she trotted nervously up and down the shining strip of sand, facing now the north, and now the south, and then the east.

The call did not come from their old windfall home in the swamp. It came from beyond that, and in a flashing vision there rose through her blindness a picture of the towering Sun Rock, of the winding trail that led to it, and the cabin on the plain.

And to that call she responded, leaving the river and its food behind her—straight out into the face of darkness and starvation, no longer fearing death or the captivities of the world she could not see; for ahead of her, two hundred miles away, she could see the Sun Rock, the winding trail, the nest of her first-born between the two big rocks—and Kazan!

CHAPTER XVIII.

The Last of McTrigger.

Sixty miles farther north Kazan lay at the end of his fine steel chain, watching little Professor McGill mix a pull of tallow and a dozen yards from him lay the big Dane, his huge jaws drooping in anticipation of the unusual feast which McGill was preparing.

was in sight. Alone with McGill he became quiet. Something told him that McGill had come as a friend that night when he and the big Dane stood shoulder to shoulder in the cage that had been built for a slaughter pen.

Today he placed the tallow and bran before Kazan, and the smile in his face gave way to a look of perplexity. Kazan's lips had drawn suddenly back. A fierce snarl rolled deep in his throat.

"It's a fool job—tryin' to make friends with him," he said. Then he added, with a sudden interested gleam in his eyes, "When you startin'?"

"With first foot," replied McGill. "It ought to come soon. I'm going to join Sergeant Conroy and his party at Foad on Lac by the 1st of October."

"You're taking the dogs?"

"Yes." Sandy lighted his pipe, and spoke like one strangely curious. "Must cost a heap to take these things 'cross your land."

"Scott!" breathed Sandy. "An' you carry all that alone with you? Ain't you afraid—something might happen?"

The little professor was looking the other way now. The carelessness in his face and manner changed. His blue eyes grew a shade darker. A faint smile upon his lips.

Five Times He Fired at Twenty Paces.

hard smile which Sandy did not see however about his lips for an instant. Then he turned, laughing.

"It's a very light sleep," he said. "A footstep at night rouses me. Even a man's breathing awakes me, when I make up my mind that I must be on my guard. And, besides—" he drew from his pocket a shining blue-steeled automatic—"I know how to use this."

When Sandy left, McGill followed him with a suspicious gleam in his eyes, and a curious smile on his lips. Then he turned to Kazan.

for freedom. Night after night he had gnawed at his steel chain. Night after night he had watched the stars, and the moon, and had listened for Gray Wolf's call, while the big Dane lay sleeping.

Tonight it was colder than usual, and the keen tang of the wind that came fresh from the west stirred him strangely. It set his blood afire with what the Indians call the Frost Hunger.

Among other things he said, "This'll put the black flies to sleep, Kazan. A day or two more of it and we'll start."

Five days later McGill led first the Dane, and then Kazan, to a peaked cabin. Sandy McTrigger was off, and Kazan watched for a chance to leap at him. Sandy kept his distance, and McGill watched the two with a thought that set the blood running within him.

For three days the journey continued without incident along the shore of Lake Athabasca. On the fourth night McGill pitched his tent in a clump of balsam poplar a hundred yards back from the water.

Behind a rock he built a very small fire, and prepared supper. After this he went into the tent, and when he came out he carried a blanket under his arm. He chuckled as he stood for a moment over Kazan.

"We're not going to sleep in there tonight, old boy," he said. "I don't like what you've found in the west wind. It may be a—thunderstorm!"

It was a quiet starlit night, and hours afterward Kazan dropped his nose between his forepaws and dozed. It was the snap of a twig that roused him.

He laughed at his joke, and buried himself in a clump of stunted balsam poplars 300 paces from the tent. Here he rolled himself in his blanket, and went to sleep.

(TO BE CONTINUED.)

BRITISH GERMANY FOR GENERATIONS

The picture is reproduced from a drawing printed in Black and White, an English magazine, in October, 1908. The artist illustrated an article describing the development of Zeppelin airships by the Germans, and he aimed to picture the horrors of an air attack on London if Germany and Great Britain should ever engage in war.

The world will not soon forget Teutonic terrorism visited on women and children—the rape, murder, enslavement, torture, vandalism, air raids, plors and insults of Junkerdom

An important part of the German gospel of making war is the program of spreading terror among non-combatants of enemy nations. How this policy has been carried out, we know the black history made by the Teutons the last three years in Belgium and northern France, in Serbia and Russian Poland.

It has been a cowardly warfare of the most outrageous kind, against women and children, and old men—an unspeakable record of rape, murder, deportation into slavery, torture, savage vandalism, that will never be forgotten or forgiven.

For these crimes the world will never forget the many German soldiers, Germany will have no friends outside her border lines. Germany as a nation will be shunned and mistrusted. German individuals will be numbered and suspected for a hundred years to come.

There is talk of reprisals. Sections of the enraged populace demand it, but the official mind is all against it. English hands will be cleaner than the German's.

London newspapers for several days after the raid were crammed with details of it. When the airplanes came a little group huddled in an arch formed by the juncture of two three-story buildings.

A torpedo fell in the play yard of a large school. As it Saturday night children were present; otherwise, there probably would have been many casualties.

A flower stand, normally of small size, but which can be expanded to fill an ordinary sized window, is the recent invention of a German.

does not call upon Jehovah, and does not fast; but there are some things he never forgets. Truly, I do not think it will be safe for any German to go about the world after the war for many years."

It is asserted in England that the raids have done no military damage. Hall Caine writes that in a tour of the city following the raid he saw no property damage that could not be repaired by the mason, the street paver and the cooper.

London has seven hundred square miles of territory. Miles and miles of streets were untouched. London stands where it always did. By the slaughter of a comparatively few civilians the Germans have succeeded only in piling up a heritage of hate for the future.

London has seen women and children crushed and blown to bits and mangled bodies in the streets. The memory will linger with English men and English women. It is not well to have a nation feel as one old charwoman expressed it:

"By God, I wish some of them German would come down these streets! Hackney'd give it to 'em. Ah, wouldn't I, I'd tear the eyes out of them."

There is talk of reprisals. Sections of the enraged populace demand it, but the official mind is all against it. English hands will be cleaner than the German's.

American-made iron bands and hoops or kegs and barrels should find a ready market in the Seville district, Spain.

ceredly, singing "Keep On Carrying On." In one district four wounded soldiers strolled along the pavement, and a woman invited them into the shelter of her house.

"To the present writer," said an article in the Chronicle, "they were no dragon flies or fluttering birds. They were huge, sharply defined, mobile machines of death. They came to the metropolis, down and down, searching with contemptuous deliberation. After the first bomb a piecemeal anarchy followed.

The London Globe published a Berlin dispatch, by way of Amsterdam, in which the Teutons said they had hit Charing Cross station, the great railway station, several times. The claim is printed without comment.

"I think of what war was in the days when, with all its brutalities, it had the virtue of courage and the splendor of bravery," he wrote. "I remember the battles recorded in the old Norse sagas—when men only glorious to fight a man who could fight back, when it was a disgrace to take one's adversary unawares, and an everlasting shame to attack the weak, the disabled, or the unarmed."

The papers were filled with articles demanding an improvement in the air. It can be called a success—the enemy escaped with slight loss. It is estimated that there were twenty-five attacking planes. The English say that four of the raiders were downed, while admitting the loss of one of their own craft.

Prisoners Unable to Agree. Thirteen natives of the Trentino, Carso, and adjoining districts of Austria, who were serving as blue-jackets on the Austrian cruiser Kaiserin Elisabeth, were taken up at Tsingtau, and who were taken prisoners at the surrender of the fortress, have been released by the Japanese authorities and are to be returned to Italy.

Sound Amplifier for Telephones. For the telephone user in a noisy office, a sound amplifier of compact and convenient form has been introduced, according to the Popular Mechanics Magazine. It is particularly suited for the person who receives many important toll calls, since in reducing the loss of one of their own craft. The government, however, denied that the English airmen deserve the abuse that was theirs after the raid.

The government, however, denied that the English airmen deserve the abuse that was theirs after the raid.

But each day Kazan proved him more. No amount of kindness on his part could bring a responsive gleam in Kazan's eyes. Not once did Kazan signify a willingness to become friends. And yet he did not snarl at McGill, or snarl at his hand when he tried to get within reach. Quite frequently Sandy McTrigger came over to the little cabin where McGill was staying, and three times Kazan leaped at the end of his chain to get at him, and his white fangs gleamed as long as Sandy

Wealth from the Sea.

Deep-sea fishing off the coast of Vancouver Island has been a thriving industry for many years. Most of the individuals and firms engaged in the business have devoted their efforts to catching halibut and other food fishes, although at least one big whaling company has paid huge dividends out of the profits in catching whales. From Vice Consul Galpin, at Vancouver, B. C., the Department of Commerce and Labor learns that a new corporation will engage on an extensive scale in the catching of sharks and other fish that are worthless for food purposes. The shark-fishing branch of the industry is something new on the Pacific coast. It is proposed to use sharks for oil and fertilizer. The new firm will build cold-storage plants at a number of points on the west coast of Vancouver Island and Queen Charlotte Islands and will handle the product of the fisheries in the most approved modern style.

The halibut fisheries of the North Pacific have been mostly in the hands of American fisheries companies operating out of Seattle and Vancouver; the new concern is to be exclusively a Canadian enterprise. The success that has been attained by these companies again calls attention to a neglected field which might with profit be occupied by the Columbia River fishing concerns. The best halibut banks in the North Pacific are located north of the Columbia river. But a few miles off the bar there are vast schools of cod, grouper, flounder, sole and other excellent food fishes, with halibut obtainable in fairly good supply. For these fish there is a demand that is steadily increasing with the higher prices of meats.

The royal chinook salmon is no longer so plentiful that it can be regarded as a cheap food, but the supply of deep-sea fish is inexhaustible. Establishment of a station at Astoria of some other point near the mouth of the river, with a steamer equipped with modern apparatus might prove the starting point for a great industry right at our doors.

"Radeke Beer" at Just the Right Moment

During any home occasion there is "just the right moment" for serving "Radeke Beer" and at this moment when "Radeke Beer" comes cold and sparkling from the ice box, it is sure to be welcomed by guests. It's sparkling clearness pleases the eye; its appealing flavor delights the palate. It satisfies and gratifies. It gives the finishing touch to hospitality.

Electricity—the Friend of Man, and Also the Foe of Man

WHEN harnessed up by science it is one of Nature's most valuable gifts. When it is not under control, it often spells ruin. There are few things wholly evil or wholly good. We all know dyspepsia arises from immoderate eating, but it is also unhealthful to eat too little. Over-indulgence in anything is bad. Because of this we were given the heaven-born power of reasoning, in the not-too-much of anything.

Our sovereign brew BUDWEISER has for sixty years been a beverage of sane moderation. It has untold numbers of friends in every civilized land because of its Purity, Quality, Mildness and exclusive Saazer Hop Flavor. BUDWEISER sales exceed other beers by millions of bottles.

Visitors to St. Louis are courteously invited to inspect our plant—covers 142 acres

CAPTAIN TELLS OF DANCING WHALES

RELATES HOW THEY TANGOED TO CANNED MUSIC

And How the Big Haul Continued Until Ship's Supply of Grog Gave Out.

"Ever heard of a whale dance?" queried Captain Ben. "Ever heard of a whale tail tango? See these white hairs? Well, I have seen one, and one will do."

"Our ship 'Old Barnstable,' left New Bedford two years ago. A few days before we sailed the Admiral said: 'Ben' said he, 'you're going on a long trip, and while I'm going to give you a lot of canned music' at the same time I'm going to give you some canned music, a good, reliable talking machine and a tin horn as big as a cannon. I don't want your men to get lonesome, Captain Ben, for I'm a believer in the old adage, 'All work and no play makes Jack a dull boy.'"

"That's what he did, too, and a better crew was never signed up," continued Captain Ben. "They were all Cape Codders except the Portuguese cook (and he has sailed with me nigh on ten years,) and all old whalers."

"We arrived in the southern waters along in December and commenced looking for whales. We didn't find any."

"Along in January about eight bells one evening the men wanted some canned music, so I had the mate get the box and horn on deck and start the dance."

"Well, the men danced and horn-piped and were all enjoying themselves, when of a sudden-like the whole sea was alive with sperm whales, and the way they made the waters foam with their flukes was a caution. The mate stopped the music and the whales seemed to disappear."

"We had a long talk and called in the crew for their ideas about keeping the whales near us for a few days. There were enough of them to fill all the whalers in the States. Old man Crosby piped up that we start the music again and see what would happen, and perhaps we could keep the whales around us for a couple of days by playing every hour or so."

"We put on a new pie plate and started the merry-go-round, and it wasn't more than ten minutes before the whales were all around us and seemed to be enjoying the music. 'Say, did you ever see a sperm open his mouth? Well you can drive a wagon in and turn around, and he has got the greatest lot of ivory marlinspikes you ever saw for teeth. It made us kinder shabby to see those jaws, and we didn't know but they might get foolish and try to come on deck."

"But old Portuguese, the cook, said he had seen 'em for the first time, and his customers had always given them a ration of grog and they were good-natured and would lay around the ship just as long as they got their grog regular."

"It only took for a few minutes for the bo'n and a couple of hands to get a cask or red eye and some pails and every blasted sperm was winking his port eye. Well, we gave each one a half-bucket of red, niced down his throat. A few coughed, but most of them just smacked their jaws and disappeared. No sooner had one bunch dropped out of sight before another came up for grog, and at the end of an hour we were nigh were out—and that's when my hair turned gray."

"We started the orchestra again with the new stove lid on, a ragtime tune, and you should have seen that sea. I guess all the sperm in the South Sea were there. They dived, came up and blowed, turned over on their backs and snapped their jaws."

"Then all of a sudden they all paired off and seemed to hold each other with their forward flippers and rolled over and over in time with the music, and all of a sudden there were all of 500 tails in pairs sticking up in the air, and they kept waving and twisting in time with the ragtime music."

"It was the greatest sight I ever seen. They would wave and twist their tails for about ten minutes and then would come up to blow and roll over and over and go over the same performance with their tails."

"The next morning we didn't have to pipe them to grog. They were already there. We decided we would give them one concert that night, with refreshments, and then the next day we would commence killing, slowly and carefully, for fear they might get mad and butt the ship, for if they did it would be good-by Sunday school for us."

"Well, that night we had another tango dance, only more so and faster fun, and it lasted until two bells in the morning. They must have learned some new twists, I think it must have been the concert two."

"The next day we commenced killing, and it was a shame—they were so tame. After we had killed two old cows we noticed that the whole school were pushing one big, fat, old whale toward the ship and we killed him. After that we had all old bulls—looked like the school wanted to get rid of the old duffers—and we soon filled every cask with oil, and with the teeth, bone and the tucky flaps of ambergris we had the banner catch of the past ten years."

"Say, Jake, my hand gets shaky when I think of those nights."

HOW INSECTS BREATHE.

Curious System of Tubes That Run the Length of Their Bodies.

Landlubber animals have lungs and sea creatures have gills. But insects have neither one nor the other. They have a complex system of tubes running throughout the whole length of the body, by means of which air is conveyed to every part of the system. As they are destined to contain nothing but air, they are strongly supported to guard against collapse from pressure.

This support is furnished by means of a fine thread running spirally within the walls of the tube, much in the same way that a garden hose is protected with wire. There are generally two of these tubes which run the whole length of the insect's body.

Many flies, as larvae, live in the water. Arranged along each side of their bodies is a series of exceedingly thin plates, into each of which run a series of blood vessels. These plates act and absorb the oxygen contained in the water. The tail ends in three featherlike projections. By means of these the larva causes currents of water to flow over the gills and thus their efficiency is increased.

The gnat also lives in the water as a larva. But it has no gills. Therefore it cannot breathe the oxygen in the water but must breathe air. This is done by means of a spiracle situated at the tip of its tail. Indeed, the tail is prolonged into a little tube. The larva floats along head downward in the water with this tube just above the surface to enable it to breathe. Some times it is provided with two little tubes which act in the same manner.

Milling Flour.

The process that the kernels of wheat go through in being turned into flour is often so complex and intricate that a writer in the Mothers Magazine, has counted 70 different streams into which a single kernel of wheat is separated on its way to the flour bag. Delicate air currents sift out elements of the flour, which is separated from the kernel by a long and slow process because this is thought better for the flour than if the grain were hulled by a single action. From the cleaning of the wheat kernels to the final packing in bags the flour travels a mile in some modern mills.

The kernels are washed first, 20 gallons of water being used to every bushel of wheat. Then drying cylinders give the kernels a bath of hot and cold air to restore them to their normal condition and pass them to the scourers that send out polished clean grains to the stock bins. Here the wheat is tempered for several hours before being sent to the grinding bins.

The grinding room described is all pure white from the tiled floors, walls, and ceilings to the belts on the machines, which are themselves, however, painted a dull red. The grains, gradually crushed, and sent again to a separator that sifts out the broken mixture, according to the size of the particles which are then run over long reaches of silk bolting cloth. The bran is blown off and the flour particles are bolted through. This is where the 70 processes come in, for the flour goes back again and again through the grinders, separators and the bolting process. Even before the wheat is ground there are 12 processes in cleaning it. The machines are at work in room after room where not a workman is seen. The long belting is covered over and to the last the wheat or flour is not touched by human hand, but emerges through a chute that fills bag after bag. One milling company pays \$25,000 a year to get special salts to protect its flour.

Photography in Small Offices.

A camera and a few sheets of black carbon paper can be made to do wonders in the small newspaper office. Often when the cost of a half tone would be prohibitive and the result from it not of the best, a simple outline drawing traced from a photograph and reproduced in a smaller size etching will give excellent results and bill the bill exactly. Try this experiment; lay out half a dozen goods ads. for merchants who do not use space at all or who could profitably use more space; illustrate each of these layouts with a strong, pertinent line drawing, traced from a photograph, giving it if possible local interest; then put the whole layout up in attractive shape and place it before the prospective customer. Often the drawing of a well selected subject will do the business when nothing else will, and a fine etching from that drawing is inexpensive and easily obtained.

There are many other ways you will find, in which a camera will make itself useful in the small newspaper office, and since a good instrument can now be had at a very small cost, every newspaper office should have one. In one way and another it will be found quite a valuable addition to the office equipment as well as a source of satisfaction to its owner.

Signs of Summery Rains.

The following natural weather signs are given in an old book: The soaking of frogs in the morning indicates fine weather. If frogs croak more than usual, it tends issue from their holes in the evening in great numbers, if the earthworms come out of the earth if the moles throw up more earth than usual, if the crows look toward the heavens and turn up their nostrils as if catching some smell, if the oxen lick their fore feet, if the dogs lie on their right sides—all these are signs which announce rain.

Kankakee, Illinois

My Nursery

Children love to play in nurseries furnished with clean, warm, cheerful

NEPONSET Floor Covering

It's the good fairy of the floor. Dry, sanitary, resilient to the step, easily kept clean. Lies flat without tacking, and won't curl. Makes dull, dingy rooms look like new. Tough, long-lived fabric, product of the century-old manufacturing experience

of one of New England's oldest firms. Made in scores of appropriate designs, specially suitable for nurseries, kitchen, pantry, bedrooms, bathrooms, halls, closets, and even dining-room and living-room. Come in and pick your favorite patterns today.

THE ECONOMY

Promptness

DEAR PATRONS: In these strenuous times great changes are being made, deliveries are being cut out, cash systems adopted, etc.

Let Us Reason Together

A business to succeed must constantly grow and prosper and to grow and prosper we must have the confidence therein upon the part of its customers. Absolutely dependable goods, fair prices and courtesy creates that confidence.

Therefore Promptness is the foundation of all business success.

A. C. BEARDSLEY & SONS

Big Jo still on top

Do you get up at night? Sano! is surely the best for all kidney and bladder troubles. Sano! gives relief in 24 hours from all back-ache and bladder trouble. Sano! is a guaranteed remedy. 35c and \$1.00 a bottle at the drug store. 6-18

Ed Codd spent several days the past week with his parents in this city before leaving for Iowa where he will take a position in the automobile business.

Dr. Noah Magruder who has been on the sick list is able to be out again.

SLEEP IS INDUCED IN HARMLESS WAY

Inventor Gets Idea From Seeing African Mother Use Method on Baby.

Wakeful, restless children and grown persons with nerves and insomnia have had a sleep-producing machine invented for them which is simple, harmless and effective.

The inventor is an Englishman who was given his idea by an African mother whom he watched with great interest as she soothed the fretful wails of her child and coaxed him into slumberland by the simple means of letting water flow thru a reed across the child's forehead.

The water flowing thru the reed had a massage-like action which was restful and quieting.

The water had a certain rhythmic beat and soothing drone to it which psychologists have long recognized to have the power of inducing drowsiness and sleep.

The sleep-producing machine is based on this principle. It is an odd-looking contrivance, but could be made in almost any home.

It consists of a little reservoir which is perched up on the top of a six-foot standard.

The little tank is filled with water, which flows thru a rubber tube in a regulated quantity and at a graduated speed.

This tube connects with a small pad which is placed upon the forehead. Thru the pad the water passes in a steady flow.

The machine is said to be invaluable in a sick room where a patient cannot sleep from pain and nerve exhaustion.

It is the only means, oftentimes, with the exception of opiates, which can bring a patient rest.

CHINA FAVORS U. S. CANDY

War Aids American Confectioners to Get Toe Hold in Hongkong.

American confectioners may almost be said to dominate the market in their line in Hongkong at the present time in spite of the fact that it has been controlled by British goods in the past. Certainly American manufacturers control the trade in high-class goods and have secured a very large share of the more ordinary "bucket" trade.

Part of the present American hold on the trade may be due to restrictions in Great Britain on the export of sugars and similar commodities, but the greater share of the trade goes to the United States now as a matter of sheer merit and an increasing public recognition that the American goods are better value all around. Dealers in Hongkong who have heretofore handled little or no American candy now carry considerable stocks, while others who have been dealing in such goods to some extent now carry American confectionery almost to the exclusion of other brands. For the first time several of the larger firms have standing monthly orders with American exporters.

Most of the business is still in box or tinnead goods, but there is an increasing demand for bulk products. Heretofore, also, the demand has been largely confined to chocolate products, but recently a demand for mixed candies of all sorts has developed. American chocolate also is used in increasing quantities. While much of this trade is due to war conditions, all of it is serving to introduce a line of American goods in this field for which there is a constant demand, and a large part of the trade undoubtedly will prove permanent.—Commerce Reports.

ELECTRIC LIGHT FOR HORSES

Lamp on Animal's Head Throws its Rays on Roadway.

An electric headlight for horses, the invention of an Arkansas man, is an electric lamp that rests at the top of the horse's head, directly between the animal's ears. The lamp throws the light on the roadway ahead and thus helps to avoid accidents.

The lamp is provided with a radiator which has a double convex lens and is a part of a hollow post thru which the conducting wire is led. This post is riveted at the lower end to a curved metallic base which is secured to the upper part of the bridle.

The lamp may be detached when desired and used as a hand lamp around the stable, the hollow post portion serving as a handle.

URGES GLOVES FOR FOOTWEAR

Doctor Declares Shoes Because They Shut Out Light.

Gloves for the feet—yes, actual gloves, with separate compartments for every one of the toes—are advocated by Dr. D. T. Quigley of Omaha, Neb.

The skin of the feet constantly is the prey of bacteria, according to the doctor.

"The greatest enemy of bacteria is sunlight," he says, "whereas the foot in a modern shoe is constantly in darkness."

FAVOR LEATHER SUBSTITUTES

Manufacturers See Way to Reduce Cost of Shoes.

To cut the high cost of shoes, the use of proved substitutes for leather is recommended in a report adopted by the National Boot and Shoe Manufacturers' Association at their recent session in New York. Rubber and fiber soles and a new paper composition for uppers are among the substitutes said to be attracting most attention from manufacturers. Efforts also are being made to popularize colored cloth tops, which likewise will effect a saving of leather.
